AMERICAN VIDEO EQUIPMENT

VSI-PRO

The VSI-PRO will help

- Reduce pilfering from cash registers
- Reduce suspicious transactions such as 'Voids', 'No Sales', 'Returns', 'Refunds' and 'Sweet-Hearting'.
- Identify rogue members of staff

The VSI-PRO saves you money, by keeping it in the Till!

What does the VSI-PRO do?

The VSI-PRO is a Video to Serial interface. It overlays serial data to a video signal, typically from a cash register, but can be used for many other devices, such as weigh bridges, speed camera's, cash counting devices, etc.

The VSI-PRO translates data from transactions at the cash register and overlays this information as text onto video images from the CCTV system. This information is permanently embedded onto the images, and therefore cannot be tampered with. The combination of Cash Register data and CCTV images makes it easy to identify suspicious transactions, such as this one.

CCTV Image

The picture on the right shows without doubt, that not all items passed over the counter were entered into the cash register.

A quick review of the footage shows that this kind of transaction is easily discovered.

Without the VSI-PRO this transaction would have gone undetected as neither a review of the CCTV footage or of the Till receipts alone would have identified this.

CCTV Image & VSI-PRO Data

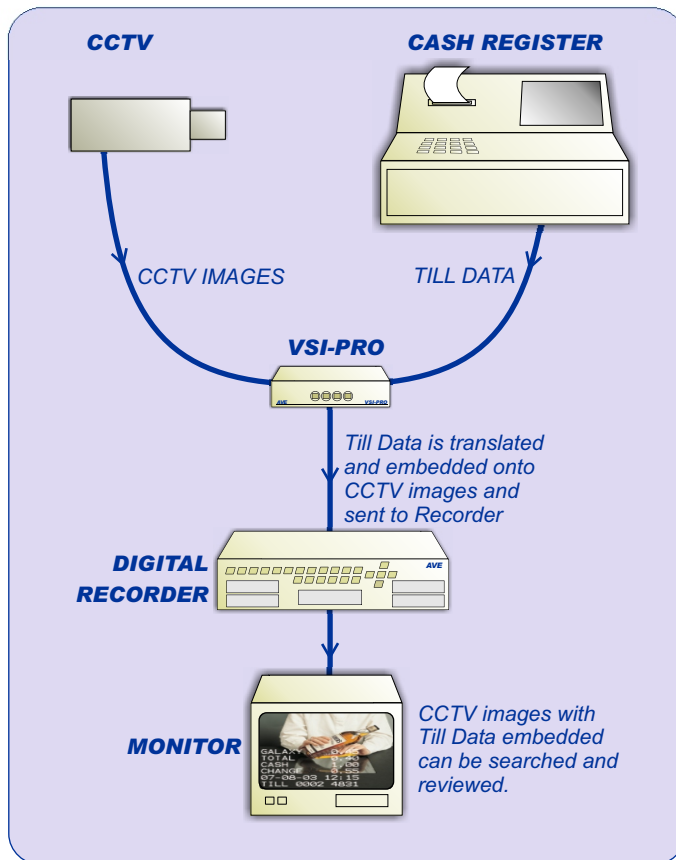

In addition the VSI-PRO not only captures this information, but allows the user to set-up alarms on specific transactions, products or members of staff. These are then fully searchable and depending on set-up, can be reviewed at the touch of a button without viewing hours of surveillance.

VSI-PRO is compatible with over 350 Cash Registers

Proven to dramatically reduce theft at the point of sale!

How does it work?

Video images from the CCTV system goes into the VSI-PRO. The camera selected typically watches the general cash register area, including the register, counter, employee and customer.

Transaction data from the cash register goes to the VSI-PRO, where it is filtered and translated into viewable 'receipt' type text.

The VSI-PRO then overlays the Till data onto the CCTV images and embeds it permanently, so it cannot be tampered.

These new images are sent to the recorder for storage.

Images stored on the Recorder can then be analysed & searched by user, alarms, exceptions, voids or any other parameters set up by the user.

This is basic system, but multi-cash register systems can also be accommodated with the use of a VSI-server which can handle numerous cash registers at the same time.

The VSI-PRO is compatible with 350 different cash register and devices, including all the top brands.

Number 1 POS/Cash Register interface in the world

VSI-PRO Features

- Hardware data overlay (the data is added to the video image and cannot be removed)
- Built in support for over 350 different cash register and other devices.
- Built in history of suspect transactions such as 'Voids', 'No Sales', 'Returns', 'Refunds' and 'Sweet-Hearting'.
- Built in programmable hardware alarms control of external devices
- Works with any recording device
- Real time Filtering and export to external devices such as a DVR .
- Networkable, via AVE network.
- Set-up done by simple onscreen menu's
- The VSI-PRO is the Number 1 POS/Cash register interface in the world.
- Easy set-up (60% of Set-ups are plug and play)
- Large dealer network
- Largest range of supported devices of any POS/Cash register interface.
- Alarms for suspect transactions
- Ongoing development for new devices.
- Bespoke development for (registers / devices) or features not currently available
- All VSI are supplied with detailed instructions, depending on device, from our extensive compatibility database.
